Examiner's Reasons for Allowance

1. Claims 1-12 have invoked means plus function pursuant to 35 U.S.C. 112, sixth paragraph. Where means plus function language is used to define the characteristics of a machine or manufacture invention, claim limitations must be interpreted to read on only the structures or materials disclosed in the specification and "equivalents thereof." (Two en banc decisions of the Federal Circuit have made clear that the Office is to interpret means plus function language according to 35 U.S.C. 112, sixth paragraph. In the first, *In re Donaldson*, 16 F.3d 1189, 1193, 29 USPQ2d 1845, 1848 (Fed. Cir. 1994), the court held:

The plain and unambiguous meaning of paragraph six is that one construing means-plus-function language in a claim must look to the specification and interpret that language in light of the corresponding structure, material, or acts described therein, and equivalents thereof, to the extent that the specification provides such disclosure.

Here, the claims contain "channel phase control means for rotatably connecting the screw head relative to the spacer" that has invoked the means plus function language. Thereby, examiner shall use the specification and drawings provided by the applicants in determining the structural limitations of the channel phase control means.

2. The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach an injection screw having the spacer, screw head with at least one or more second flow channels, spring means, and the channel phase control means as taught by the disclosure.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Godley II (3438393), Schirmer (4349044), Dinerman (4850851), Durina et al (5439633), Anderson et al (2004/0253335), Eichlseder et al (4477242), and Pirro (4472058).
